Chapter 1: Product Overview

Thank you for purchasing the Ubiquiti UniFi Enterprise WiFi System. The UniFi Enterprise WiFi System includes the UniFi Controller software that allows you to manage your wireless network using your Web browser.

This User Guide is for use with version 2.0 or above of the UniFi Controller software with the following UniFi Enterprise WiFi System Access Point models:

Model	Maximum Power Consumption	Maximum TX Power
UniFi AP (UAP)	4W	20 dBm
UniFi AP Long Range (UAP-LR)	6W	27 dBm

Unless otherwise needed to specify differences between the two models, this User Guide will refer to both as UniFi AP. Additional information is available on our website at http://wiki.ubnt.com/UniFi_FAQ

The UniFi Enterprise WiFi System also includes the necessary hardware for mounting the unit on a wall or a ceiling. The UniFi Enterprise WiFi System supports Passive PoE which works with the included PoE adapter. If you want to power the UniFi AP from an 802.3af compliant switch, Ubiquiti Networks offers the optional Instant 802.3af Adapter to instantly transform any PoE device into a fully 48V 802.3af compliant product. Product details are available on our website at **http://ubnt.com/8023af**

Package Contents

UniFi AP

Wall-Mount Bracket Ceiling-Mount Plate

UniFi Controller

CD with User Guide

24v PoF

Adapter

Quick Start Guide

Power Cord

M3x50 Flat Head M3 Screws To (Qty. 3)

M3 Keps Nut with Tooth Washer (Qty. 3)

M2.9x20 Self Tapping Screw (Qty. 3)

M3x20 Screw Anchor (Qty. 3)

- Microsoft Windows XP, Windows Vista, Windows 7, or Mac OS X
- Java Runtime Environment 1.6 (or above)
- Web Browser: Mozilla Firefox, Google Chrome, or Microsoft Internet Explorer 8 (or above)

Network Topology Requirements

- A DHCP-enabled network (for the AP to obtain an IP address as well as for the wireless clients after deployment)
- A management station computer running the UniFi Controller software, located either onsite and connected to the same Layer-2 network, or off-site in a cloud or NOC

Sample Network Topology

¹ Please refer to <u>"Wireless Uplinks" on page 35</u> for setting up wireless-linked APs.

² All UniFi APs support off-site management controllers.

Front

LED Indicates the status of the device. See the table below for details.

LED Color	Status
Flashing Amber	Initializing.
Steady Amber	Factory default, waiting to be integrated.
Alternating Amber/Green	Device is busy; do not touch or unplug it. This usually indicates a process such as a firmware upgrade is taking place.
Quickly Flashing Green	This is used to locate an AP. When you click Locate in the UniFi Controller software, the AP will flash. It will also display the location of the AP on the map.
Steady Green	Indicates the device has been successfully integrated into a network and is working properly.
Steady Green with occasional flashing	Indicates the device is in an isolated state (all WLANs are brought down until an uplink is found).

Back

Reset Button The reset button serves two functions:

- **Restart** It will restart the device when you press and release it quickly.
- **Restore Factory Defaults** When you press and hold it for more then five seconds, it will restore the device to the factory default settings.

Ethernet Port Connects to the 24V PoE Adapter to provide power to the unit.

Chapter 2: Installation

Hardware Installation

The UniFi Enterprise WiFi System is powered by the included PoE (Power over Ethernet) adapter. To install the AP, perform the following steps:

1. Connect an Ethernet cable to the Ethernet port on the UniFi Enterprise WiFi System.

2. Connect the power cord to the power port on the *PoE Adapter*. Connect the other end to of the power cord to a power outlet.

3. Connect the other end of the Ethernet cable to the Ethernet port labeled PoE on the *PoE Adapter*.

Note: If you plan to mount the AP on your ceiling, perform the ceiling mount installation steps before connecting the Ethernet cable to the PoE Adapter.

Below is an overview of the Power over Ethernet connections.

Mounting the Access Point

The UniFi Enterprise WiFi System can be wall-mounted or mounted on a ceiling. Perform the steps for the appropriate installation:

Wall-Mount

1. Align the *Wall-Mount Bracket* with the *Wall Mount* text facing up. There are horizontal and vertical lines on the bracket to help with orientation.

- 2. Use a pencil to mark the holes on the wall.
- 3. Use a 6 mm drill bit to drill the holes in the wall.
- 4. Insert the 3 M3x20 Screw Anchors into the wall.
- 5. Secure the *Wall-Mount Bracket* to the wall by inserting the *M2.9x20 Self Tapping Screws* into the anchors.

6. Align the notches on the AP with the notches on the *Wall-Mount Bracket*.

7. Turn the AP clockwise until it locks into place.

Ceiling-Mount

- 1. Remove the ceiling tile.
- 2. Align the ceiling-mount plate to the center of the top side of the ceiling tile.
- 3. Use a 3.5 mm drill bit to drill holes for the three flat head screws.
- 4. Cut or drill a circle approximately 25 mm in size that lines up with the larger circle on the *Ceiling-Mount Plate*. This will be used for the Ethernet cabling.

5. Secure the *Wall-Mount Bracket* and *Ceiling-Mount Plateto* the ceiling tile using the 3 M3x50 Flat Head *Screws* and 3 M3 Keps Nuts with Tooth Washers.

6. Feed the Ethernet cable through the hole and then align the UniFi AP with the notches on the *Wall-Mount Bracket*.

- Note: The UniFi AP supports Passive PoE, which works with the included PoE adapter. If you want to power the UniFi AP-Outdoor from an 802.3af compliant switch, Ubiquiti Networks offers the optional Instant 802.3af Adapter to instantly transform any PoE device into a fully 48V, 802.3af compliant product. Product details are available on our website at http://ubnt.com/8023af
- 7. Turn the AP clockwise until it locks into place.

Software Installation

Insert the UniFi Controller software CD into your CD-ROM drive and follow the instructions for your specific computer type.

Mac Users

1. Click the Install icon.

2. Click **Continue** and follow the on-screen instructions to install the software.

3. Go to **Go** > **Applications** and double-click the *UniFi* icon.

Proceed to <u>"Configuring the UniFi Controller Software"</u> on page 6.

PC Users

- 1. Launch UniFi-installer.exe.
- 2. Click Install.

3. If your computer doesn't have Java 1.6 or above installed, you will be prompted to install it. Click **Install** to continue.

Congratulations, your wireless network is now configured.

A login screen will appear for the UniFi Controller management interface. Enter the admin name and password that you created and click **Login**.

Proceed to the next chapter for information on using the UniFi Controller software.

Chapter 3: Using the UniFi Controller Software

The UniFi Controller software that comes with your UniFi Enterprise WiFi System has a browser-based interface for easy configuration and management.

To access the interface, perform the following steps:

- 1. Launch the UniFi Controller application if hasn't already been started.
 - Mac users: Go > Applications > UniFi
 - Windows users: Start > All Programs > Ubiquiti UniFi.
- 2. The UniFi login screen will appear. Enter the admin name and password in the appropriate fields and click **Login**.

UniFi
Plase login to manage your wireless networks. Admin Name Password Login

Interface Tabs

The UniFi software consists of six primary tabs. This User Guide covers each tab with a chapter. For details, on a specific tab, refer to the appropriate chapter.

- <u>"Map Tab" on page 14</u>
- <u>"Statistics Tab" on page 21</u>
- <u>"Access Points Tab" on page 23</u>
- <u>"Users Tab" on page 25</u>
- <u>"Guests Tab" on page 27</u>
- <u>"Offline Clients Tab" on page 29</u>

Common Interface Options

The common interface options are accessible from all tabs in the UniFi interface.

Access Points

- **connected** Drop-down clickable list of all of the Access Points that are online.
- **disconnected** Displays a list of Access Points that were previously online but are no longer accessible.
- **pending** Drop-down clickable list of all of the Access Points that are not yet managed but are available for management.

Stations

- **users** Displays the total number of users connected to the primary network.
- **guests** Displays the total number of users connected to the guest network.

Recent Events

Displays a list of recent events including the date and time the event occurred and the details of the event. The *User* and *Access Point* names are clickable links.

Event Slider Move the slider right and left to navigate between pages of events.

Search Allows you to enter text you want to search for. Simply begin typing, there is no need to press Enter.

Clicking on an Event Device Link

The event messages have clickable links [in brackets underlined in gray text] for AP (See <u>"Access Point Details"</u> on page 30), User and Guest (See <u>"User/Guest Details"</u> on page 39). Details vary based on the selection.

Alerts

Important events are displayed in the alerts window. The date and time of the event and the message are displayed.

Search Allows you to enter text you want to search for. Simply begin typing, there is no need to press *Enter*.

Show Archived Show all of the alert messages that have been archived.

Archive All Archive all of the alert messages displayed on the screen.

Adopt Click to adopt an Access Point that is waiting for adoption.

Archive Archive the selected alert message.

Mail Server	
SMTP Server	Enable Mail Server Port 25 Enable SSL

System Configuration

System Name Editable field with the system name.

Country Select your country from the drop-down list.

Services

Automatic Upgrade When enabled, this option will automatically upgrade your firmware when an update is available.

LED When enabled, the LED on the Access Point will light up. When disabled, the LED will turn off.

Background Scanning When this option is enabled, all managed Access Points will scan in the background for "Rogue Access Points" – third-party or UniFi Access Points that are being managed by another instance of the UniFi Controller software. This option is disabled by default.

• Scan Now When clicked, all managed Access Points will scan across all maps for two to three seconds. New Access Points in their default state will appear under Access Points > Pending.

Load Balancing Sets a desired number of clients per AP. While an AP will allow more clients to connect, it will start to look at those with lower signals and disconnect them.

Network Discovery When enabled, this option allows UniFi to be discoverable via UPnP. This option is disabled by default.

Uplink Connectivity Monitor It monitors the uplinks of the managed Access Points, either wired or wireless, by checking to see if the gateway/custom IP can be reached. The monitor and wireless uplink capability are enabled by default.

- Use default gateway Use default gateway is selected by default; all managed Access Points will use the gateway of the Access Point that is providing IP information, either by DHCP or Static designation.
- Use custom IP Select Use custom IP to specify an IP address; all managed Access Points will use the IP address you enter in the Uplink IP address field.

Remote Logging Enable to define a remote syslog server. Enter the IP address and port of the syslog server.

Click **Apply** to save any changes that you have made.

Mail Server

When enabled, UniFi will send email alerts when triggered (Pending Access Points and Discconnected Access Points) to the administrator email address specified under Settings > Admin Settings > Admin Preferences > Email Alert.

Mail Server					
	SMTP Server	🗹 Enable Mail Server	Port 25	Enable SSL	
		Enable authentication: username		password *******	
	Test SMTP Server	Send test email to		Send	
Apply					

SMTP Server Enable by selecting the check box and entering the outgoing (SMTP) mail server name. Optionally, you may enable Secure Sockets Layer (SSL) to provide communication security over the Internet. The port number will automatically change to 465.

Enable authentication Enable by selecting the check box and entering the username and password required by the mail server.

Test SMTP Server Enter an email address and click **Send** to test the mail server setup.

Apply Click Apply to save changes.

	O Promotional URL
Portal Customization	Enable portal customization
Portal URL Hostname	Use hostname

 Simple Password When this option is selected, guests are required to enter the simple password and accept the Terms of Use. When you select Simple Password, you must select Guest Policy under Settings > Wireless Networks > SSID > Edit > Wireless Configurations in order to enforce entry of the password and selection of the Terms of Use by the guest.

Authentication Guest Password	○ No authentication Simple Password Hotspot External Portal Server
Expiration	8 hours ‡
Landing Page	Redirect to the original URL
	O Promotional URL
Portal Customization	Enable portal customization
Portal URL Hostname	Use hostname

- Hotspot When selected, enables *Hotspot* functionality including the ability to customize portal login pages and bill customers using major credit cards or via PayPal[™]. When you select *Hotspot*, you must select:
 - **Voucher** or **Payment** in the *Hotspot* section as a method of Hotspot authorization
 - Guest Policy to enforce entry of voucher, payment, and Terms of Use by the guest (Go to Settings > Wireless Networks > Name_of_wireless_network > Edit > Wireless Configurations.)

Hotspot	
Voucher	Enable voucher-based authorization
Payment	Enable payment-based authorization (Paypal Website Payment Pro required)
Paypal	Username:
	Password:
	Signature:
	Use Paypal Sandbox (Apply Sandbox Account)
Hotspot Operator	Go to Hotspot Manager

 External Portal Server If using an external server to host a custom guest portal, enter the IP address in the Custom Portal > IP Address box using the following format: 192.168.0.0.

uthentication	\bigcirc No authentication \bigcirc Simple Password \bigcirc Hotspot \odot External Portal Server
ustom Portal	IP Address

 Guest Password (Option only available when using Simple Password authentication) Enter a password that guests must enter before accepting the Terms of Use and connecting to the Internet.

- Expiration (Option only available when using No authentication or Simple Password authentication) Allows the specification of guest login expiration after a designated period of time. Options include: 8 hours, 24 hours, 2 days, 3 days, 4 days, 7 days, and User-defined. User-defined can be designated in minutes, hours, and days.
- **Custom Portal** (Option only available when using *External Portal Server* authentication) Enter the IP address using the following format: 192.168.0.0.
- Landing Page (Option only available when using *No authentication, Simple Password,* or *Hotspot* authentication) The landing page is the page where guests are redirected after accepting the Terms of Use. There are two options available:
 - Redirect to the original URL When this option is selected, guests are directed to the URL they requested after accepting the Terms of Use.
 - Promotional URL When this option is selected, guests are redirected to the URL that you specify here after accepting the Terms of Use. Specify the URL with http:// in front of the Web address.
 Example: http://www.ubnt.com
- Portal Customization (Option only available when using No authentication, Simple Password, or Hotspot authentication) When enabled, allows customized portal pages to appear in place of default login pages. See <u>"Portal Customization" on page 43</u> for details on setting up custom portal pages.
- **Portal URL Hostname** Allows the designation of a hostname for the portal URL in place of the default IP address. Paired with a SSL certificate, ensures site certificates are displayed as trusted in the guest browser. Example: www.ubnt.com

Hotspot

The Hotspot options are only available when *Hotspot* authentication is selected.

- Voucher When selected, vouchers (including distributable code, duration values, and use restrictions) can be created using *Hotspot Manager* (see <u>"HotSpot</u> <u>Manager" on page 41</u>).
- Payment When enabled, allows payment-based authentication to be set up with your PayPal Website Payments Pro account. Payment and Transctions can be managed using Hotspot Manager (see <u>"HotSpot</u> Manager" on page 41).
- PayPal PayPal account details are entered here:
 - Username Enter the corresponding Username.
 - Password Enter the corresponding Password.
 - **Signature** Enter the corresponding Signature for the PayPal account to be used for receiving payments.

- Use Paypal Sandbox For PayPal testing purposes, enable this option and click Apply Sandbox Account to set up/access your <u>PayPal Sandbox Test</u> <u>Environment</u>.
- Hotspot Operator Click Go to Hotspot Manager to manage Wireless Guests, Payments/Transactions, Vouchers, and Operator Accounts. See <u>"HotSpot</u> Manager" on page 41.
- Apply Click Apply to save changes.

When logging in with *No authentication*, guests will be required to accept the Terms of Use before gaining access to the Internet.

Terms of Use	
I accept the <u>Term of Use</u>	
	Connect
	Connect

When logging in with *Simple Password* authentication, guests will be required to enter the *Guest Password* and accept the Terms of Use before gaining access to the Internet.

Guest Password

Wireless Configuration

Recent Events Alerts 👥	Settings Admin	~
Settings » Wireless Networks	» <u>RR-UBNT</u>	
Wireless Configurations		
Name / SSID	RR-UBNT Senabled	
Security	○ Open ○ WEP WPA-Personal ○ WPA-Enterprise	
Security Key	******	
Guest Policy	□ Apply guest policies (captive portal, guest authentication, access restrictions)	
Advanced		
VLAN	Use VLAN ID (2-4095)	
Hide SSID	Hide SSID	
WPA	WPA Mode Both Encryption Auto	
User Group	Default	
Apply Cancel		

- Name/SSID Allows you to edit the wireless network name (SSID).
- Security Selects the type of security to use on your wireless network.
 - **Open** This option is typically only used on the Guest network. When enabled, wireless network access is open to anyone without needing a password.
 - **WEP** WEP (Wired Equivalent Privacy) is the oldest and least secure security algorithm. WPA security methods should be used when possible.
 - WEP Key Enter a WEP encryption key in hexadecimal format. You can enter a 64-bit or 128-bit key:

Туре	Hex
64-bit	10 Hexadecimal Characters (0-9, A-F, or a-f) Example: 00112233AA Note: You can use 5 printable characters, which will be translated to the corresponding HEX code.
128-bit	26 Hexadecimal Characters (0-9, A-F, or a-f) Example: 00112233445566778899AABBCC Note: You can use 13 printable characters, which will be translated to the corresponding HEX code.

• **Key Index** Specifies the Index of the WEP Key used. 4 different WEP keys can be configured at the same time, but only one is used. The effective key is set by choosing 1, 2, 3 or 4.

- WPA-Personal WPA[™] or Wi-Fi Protected Access was developed as a stronger encryption method over WEP.
 WPA-Personal requires a passphrase to connect to the wireless network.
 - Security Key Enter the passphrase that users will use to connect to the wireless network.
- WPA-Enterprise WPA Enterprise uses a RADIUS server to authenticate users on the wireless network.
 - **IP Address** This is where the IP address of the RADIUS server is specified.
 - **Port** The port number is entered here. By default it is 1812.
 - **Password** The password used to authenticate on the RADIUS server is entered here.
- **Guest Policy** Select this option to enable guest access policies on this wireless network.

Advanced

- VLAN To use a VLAN, select *Use VLAN ID* and enter the port number.
- **Hide SSID** Select this option if you don't want the SSID to be broadcast.
- WPA Defines supported WPA and encryption methods.
- User Group Allows assignment of wireless users to a specific user group.

Click **Apply** to save any changes that you have made. Click **Cancel** to discard changes.

The *Admin* tab displays server version information, allows system backups to be created and downloaded, allows system restoration from backup files and allows configuration information to be downloaded to assist in support issues.

Server Information

Version The software version is displayed here. If there is an update, UniFi will automatically download it and display it here.

Backup

Download Backup Settings Click to download a file that contains all of your settings so you can restore them later if you choose.

Restore

Choose File Select this option to restore settings from a backup file that you've already downloaded.

Support Info

Download Support Info Select this option to download a file to your computer with information about your configuration that can be emailed to our support team.

Chapter 4: Map Tab

The UniFi Controller software allows you to upload custom map images of your location(s) or use Google Maps[™] for a visual representation of your wireless network. When you initially launch the UniFi Controller application, a default map is displayed.

Adding Custom Maps

To add a custom map, you must first create the image using an illustration, image editing, or blueprint application that exports .jpg, .gif, or .png file formats. Once you've created the map, you can upload it to the UniFi Controller software by performing the following steps:

1. Click Configure Maps.

Configure Maps button

2. Click Add a Map.

3. Enter a map name in the *Description* field and click **Upload my own**. Click the **Browse** button to locate the file to use as a map (valid file formats are .jpg, .gif, and .png). Click **Continue**.

4. Click Close.

Adding a Google Map™

To add a *Google Map*[™] into the UniFi Controller software Map view:

1. Click Configure Maps.

2. Click Add a Map.

3. Enter a map name in the *Description* field and click **Use Google Maps**. Click **Continue**.

UniFi	Access Points: 1 0 0 Stations: 0 0 pending users parts	Atfreth Coury 2 minutes 1
	connected doconnected pending users purch	
brow turns	NM: Sezago Adeux	

4. In order to use a *Google Map*[™], you must register with Google for a Google Maps API key. To do so, click **Specify API Key**.

5. Click or copy and paste the web link from the window into a new web browser window. Do not close the UniFi window.

http://code.google.com/apis/maps/signup.html

- 6. You need to be signed in with a Google account to obtain a Google Maps API key.
- 7. Review the terms and conditions and click the checkbox next to I have read and agree with the terms and conditions.
- 8. Navigate back to the UniFi window and copy the address that UniFi displays in the address bar.
 - Note: You only need to copy until the end of the address; do not include the port information. In the example below, the full address is https://192.168.25.191:8443/manage#. You only need to copy up to https://192.168.25.191. Do not include the colon or anything beyond it.
- 9. Navigate back to the Google Maps API Family window and paste the address into the *My web site URL*: box.
- 10.Click the Generate API Key button.

11.A new window will open displaying your key. Highlight and copy the Google Maps API key.

- 12. Navigate back to the UniFi window and paste the API Key into the *API Key* field. Click **continue**.
- 13. The default Google Map location will appear. Click the **Set Location** button in the lower left.

Set Location button

14. Select **Specify Address** to enter an address. Type in the address and then click **Go**. You also have the *Specify Coordinates* option to enter the latitude and longitude of a specific location.

15. The specified location should appear. Click **Save**.

16.Click Close.

17. You can adjust the zoom using the slider on the right.

Placing Access Points on the Map

1. Drag the *Access Point* (a) icon(s) from the *Unplaced APs* list on the left to the appropriate location(s) on the map.

The access point will appear in the area that you placed it.

Wired/Wireless Access Point Shows the location of the Access Point on the map.

Click and hold this icon to drag the Access Point to another location on the map. Click on the *Access Point* icon to reveal additional options. Click a blank area of the map to hide them.

Lock Locks the selected Access Point in the current location on the map.

Details Brings up the *Details* window. This allows you to view Access Point settings and connected users. You can also edit the radio channel, transmit power, uplink and device alias.

# Users 0				
# Guests 0				
• Uplink (Wire)				
Radio (11n/b/g)				
locate restart				

There are 4 tabs to select from in the *Details* window. *Details*, *Users*, *Guests*, and *Configuration*.

- Details Displays details on the Access Point including the MAC address, model, version, IP address, uptime, connected users, and connected guests. Click Uplink (Wire) to display the speed, duplex, Down Pkts / Bytes, Up Pkts / Bytes and Activity. Click Radio to display the channel used, transmit power, and packet information.
- Users Displays the hostname of the users that are connected to the selected Access Point and the IP address assigned to them.

You can click on the hostname to display additional details of each user. A window with Details, Statistics, and Configuration is displayed. The *Details* tab displays the MAC address, hostname, IP address, uptime and the Access Point they are connected to. The *Statistics* tab displays the channel used, signal strength, transmit and receive rates, power saving enabled or disabled, and the number of packets sent and received. You can also click **History** to see a sortable list of events. The *Configuration* tab allows you to change the alias name for the device.

• **Guests** Displays the MAC address of guests that are connected to the guest network.

• **Configuration** Allows you to change the alias name of the device, the channel setting, and set the transmit power to Auto, High, Medium, Low or Custom. You can also remove the Access Point if you no longer want to manage it with the UniFi Controller software.

Remove Remove the Access Point from the location on the map.

Show: You can click each of the following options to display Access Point *labels*, *details*, wireless *coverage* and *topology* on the map.

 Labels Displays the name applied to the Access Point. Refer to Alias under <u>"Configuration" on page 28</u> to change a name applied to an Access Point. If no custom label is applied, the Access Point's MAC address will be displayed.

• **Details** Displays the Access Point name, MAC address, transmit/receive channel, number of users connected, and number of guests connected.

• **Coverage** Displays a visual representation of the wireless range covered by the Access Point.

Topology Displays a visual representation of the network configuration and connections between Access Points. Devices that are wirelessly connected will have a wireless icon next to them. A path of arrows will indicate which device the wireless device is downlinking from.

Map: If multiple maps have been uploaded, you can select which map you want to view using this option.

Configure Maps Use this option to add maps or edit the current map(s).

Zoom Slider Use to zoom the map detail in and out.

Set Map Scale Use this option to define the scale of the map. You will draw a line and define the distance that the line represents.

Setting the Map Scale

- 1. Click the Set Map Scale button.
- Click and hold to draw a line in the area that you want to use to set the scale of the map. If you need to redraw the line, just click and hold again to draw a new line. Once you're happy with the line, click **Next**.

UniFi AP/AP-LR User Guide

3. Enter the distance that the line represents in the *Distance:* field. The distance is specified in meters by default but you can switch to feet using the drop-down selection menu on the right. Click **Next**.

Chapter 5: Statistics Tab

The *Statistics* tab provides a visual representation of the network traffic connected to your managed APs. Charts representing the number of clients and network traffic are displayed. An hour by hour chart of the usage over the last 24 hours is also displayed on this screen.

Clients

of Clients Displays a a visual pie chart representation of the client distribution. Place the mouse cursor over the chart for percentage details.

Quick Look

Quick Look	
Most Active AP	UAP-Home Sent: 170M Received: 40.7M

Search Allows you to enter text you want to search for. Simply begin typing, there is no need to press **Enter**. Page Size Allows you to determine how many results are displayed per page. Select *10, 20, 30, 40, 60, or 100*. Page Size Allows you to determine how many results are

displayed per page. Select 10, 20, 30, 40, 60, or 100.

Icon Displays the icon (a) of the Access Point (icon will vary depending on model).

Name/MAC Address Displays the hostname, alias, or MAC address of the Access Point. You can click on the name to get additional details on the Access Point.

IP Address Displays the IP address of the Access Point.

Status Displays the connection status information.

- Connected Displays that the Access Point connection is physically wired.
- **Connected (wireless)** Displays that the Access Point connection is wirelessly downlinked to a physically wired Access Point.

- Disconnected Displays if the Access Point is unreachable by the UniFi Controller software.
 Disconnected Access Points will also appear under Access Points > Disconnected at the top of the interface.
- **Isolated** A managed Access Point that is unable to locate its uplink.
- Managed by Other Displays if the Access Point is not in the default state but it is not controlled by the UniFi Controller.
- **Pending Approval** Displays if the Access Point is in the default state and is available for adoption.

Num Clients Displays the number of clients connected to the Access Point.

Download Displays the total size of downloads via the Access Point.

Upload Displays the total size of uploads via the Access Point.

Channel Displays the transmit/receive channel being used by the Access Point. The radio band is represented as *(ng)* for 2.4 GHz and *(na)* for 5 GHz.

Actions Select an action button to perform the desired action:

- Restart Restart the selected Access Point.
- Locate Click to locate the Access Point on the map. The button will flash green and black until the *Locate* button is clicked again. The LED on the Access Point will flash so that you can place it in the correct location on the map. The LED will flash until the *Locate* button is clicked again.

• Adopt Click to adopt an Access Point that appears under Access Points > Pending at the top of the interface. The Status will appear as Adopting until the Access Point is connected.

• **Upgrade** If a software upgrade is available for the Access Point, click **Upgrade** to install the latest UniFi firmware on the device. The *Status* will appear as *Upgrading* until the process is complete and the Access Points reconnects to the UniFi Controller software.

Chapter 7: Users Tab

The Users tab displays a list of users that are connected to the primary wireless network of the Access Point.

Search Allows you to enter text you want to search for. Simply begin typing; there is no need to press Enter.

- 2G Select if you only want users of the 2.4 GHz wireless network displayed.
- **5G** Select if you only want users of the 5 GHz wireless network displayed.
- All Select to show all users.

Filter by AP Drop-down list of all available Access Points. Select one to filter the results and display only users connected to the selected Access Point.

Page Size Allows you to determine how many results are displayed per page. Select 10, 20, 30, 40, 60, or 100.

Name/MAC Address Displays the hostname, alias, or MAC address of the connected user. You can click the name to get additional details.

IP Address Displays the IP address assigned to the user.

WLAN Displays the name of the SSID (network name) of the wireless LAN (WLAN) that the user is connected to.

Access Point Displays the hostname or alias of the Access Point. You can click the name to get additional details on the Access Point.

Signal Displays the signal strength and type from the Access Point to the client. If a lightning bolt symbol is present, the device is in power save mode. The device will return to active mode when *Down* or *Up* activity resumes.

lcon	Clients	Mode
a	5 GHz (either 802.11a or 802.11n/a)	Active

- All Select to show all users and guests.

Last Seen Drop-down list that allows you to filter the results on the page based on the time the user was last seen. Select 1 day, 3 days, 7 days, 2 weeks, 1 month, 2 months, or 1 year.

Page Size Allows you to determine how many results are displayed per page. Select 10, 20, 30, 40, 60, or 100.

Name/MAC Address Displays the hostname, alias, or MAC address of the connected user. You can click the name to get additional details.

User/Guest Indicates whether the user is connected to the primary or guest network.

Down Displays the total bytes of data received by the user.

Up Displays the total bytes of data sent by the user.

Actions Click an action button to perform the appropriate action.

• **Block** Click this button to block a specific user from accessing the Access Point. After you have blocked a user, click **unblock** to allow access.

Chapter 10: Access Point Details

UniFi Access Points connect to the UniFi Controller software either by Ethernet, denoted as *Connected* or by a wireless connection, denoted as *Connected* (wireless). Based on connection type, options under each tab vary.

The upper part of the window has 4 clickable tabs. The bottom of the window has a **Locate** and **Restart** button. Use the **Locate** button to flash the LED on the Access Point and flash the Access Point icon on the map. Use the **Restart** button to restart the Access Point. The 4 tabs include: *Details, Users, Guests,* and *Configuration*.

Details

Displays details about the Access Point. Click **Overview** to display the device specifics, connection details, uptime and user statistics.

locate restart						

Channel Displays the wireless channel being used.

Transmit Power Displays the EIRP in dBm.

Note: If the device has an external antenna, you can place the mouse over the icon for additional details.

TX Pkts / Bytes Displays the number of packets and total bytes transmitted by the Access Point.

RX Pkts / Bytes Displays the number of packets and total bytes received by the Access Point.

TX Retry / Dropped Displays the percentage of transmitted packets that needed to be resent and the percentage of packets that were dropped.

RX Error / Dropped Displays the percentage of packets received that needed to be resent and the percentage of packets that were dropped.

Users Displays the number of users connected to the primary network.

Guests Displays the number of users connected to the guest network.

Users

Name Displays the name (MAC address if not defined) of users connected to the primary network of the selected Access Point. You can click the links under *Name* to display additional details of each user (see <u>"User/Guest Details"</u> on page 39 for more information).

WLAN Displays the name of the SSID (network name) of the wireless LAN (WLAN) that the user is connected to.

Actions Select from one of the following actions:

- **Block** Click this to block a specific user from accessing the Access Point. This will add the client to the Blocked Device list.
- **Reconnect** Click this button to reconnect a specific user to the Access Point.

locate restart					

General Settings

Alias Allows you to name the device.

Radio (11n/b/g)

Channel Select a channel or leave the default auto setting. You can also use the default HT20 for 20 MHz operation or HT40 for 40 MHz operation.

Tx Power By default the transmit power is set to *Auto*. You can also manually select *High*, *Medium*, *Low* or *Custom*.

- High The highest TX power we can deliver.
- Low The lowest TX power.
- Medium Halfway in between High and Low.
- Custom Full custom setting. If the AP is using an external antenna, the Antenna Gain field will appear allowing you to specify the gain of the attached antenna. After applying the settings, go to Transmit Power under Detail > Radio (11/n/g/b), which always shows EIRP, mouseover it to display how it's calculated

Compatibility Selects the wireless compatibility mode. By default this is set to auto. Choose one of the following:

- Auto Supports wireless b/g/n standards.
- **11n/11g only** Only supports wireless-n and wireless-g devices.

- 11n only Only supports wireless-n devices.
- **11g only** Only supports wireless-g devices.

Click **apply** to save any changes that you have made.

WLANs

Allows the deployment of different WLANs on different Acess Points.

locate restar	t			

Name Displays the name of the SSID (network name) of the wireless LAN (WLAN) that is available for the user to connect to.

Overrides Displays SSID override information applied to the wireless LAN (WLAN) using the *Actions > Override* option.

Actions Click **Override** to enable a VLAN, set the VLAN ID, and enter the SSID override name to apply to the wireless LAN (WLAN).

Enabled Select to enable or clear to disable override settings on the WLAN.

VLAN Select to enable VLAN or clear to disable VLAN.

VLAN ID The VLAN ID is a unique value assigned to each VLAN at a single device; every VLAN ID represents a different Virtual Local Area Network. A value between 2 and 4095 may be entered. For example, in a larger deployment where there are multiple buildings, it's possible that a different VLAN ID is used in each building while still on the same corporate network.

SSID Enter the SSID override name to apply to the wireless LAN (WLAN).

PSK If the WPA-Personal security option has been applied to the WLAN under *Settings* > *Wireless Networks*, the Pre-Shared Key (PSK) for the SSID specified will automatically appear in this field.

Click **Apply** to save any changes that you have made. Click **Restore** to remove any overrides that were applied to the selected WLAN. Click **Cancel** to prevent application of any changes you have made.

Network

The Access Point can be configured to obtain an IP address automatically or configured with a static IP address. **Network Settings**

Note: Use caution when clicking forget. This will restore the Access Point to factory settings when in a *Connected* state. Do not use the *Forget* option when the Access Point is in an Isolated state. If you do, the only way to make the Access Point accessible from the UniFi Controller is to take it down and connect by wire.

Chapter 11: User/Guest Details

The User and Guest hyperlinks bring up the User/Guest Details window. There are four clickable tabs at the top of the window and two buttons located on the bottom of the window. The buttons are accessible from any of the tabs and perform the following actions:

Block Allows you to block the selected user from accessing the network.

Reconnect Allows you to reconnect a user that has been blocked previously.

Unauthorize (Available for guests only.) Allows you to remove authorization of wireless guest access and disconnect the client.

The 4 tabs contain the following information:

Details

Chapter 12: HotSpot Manager

Hotspot Manager includes four main tabs when accessed by the UniFi Controller admin account. These tabs include Wireless Guests, Payments/Transactions, Vouchers, and Operator Accounts.

The UniFi Controller admin can create operator accounts for the Hotspot Manager. Operator accounts are designed for use by hotels to service guests and have no access to other UniFi administrative features. Operator accounts will have access to three tabs after login: *Wireless Guests*, *Payments/Transactions*, and *Vouchers*.

Wireless Guests

Lists the Hotspot's currently active wireless guests. Includes the keyword *Search* box and *Show guests within* drop-down selections (options include *last 24 hours*, *3 days*, *7 days*, *2 weeks*, *30 days*, and *120 days*).

Name/MAC Address Displays the connected guest's device name or MAC address.

Package Displays the type of package that was purchased (if applicable).

Amount Displays amount paid for access (if applicable). Authorized By Displays authorization method or none. **Download** Displays the total number of bytes downloaded by the guest.

Upload Displays the total number of bytes uploaded by the guest.

Status Displays the remaining session time for the guest.

Actions

- Disconnect Allows you to immediately disconnect a guest.
- Extend Allows you to extend a guests session for an additional 24 hours every time you click this button. If you click it three times, you will extend the guest access for 3 more days.

Payments/Transactions

Lists the Hotspot's payments and transactions. Includes the keyword *Search* box and *Show guests within* drop-down selections (options include *last 24 hours*, *3 days*, *7 days*, *2 weeks*, *30 days*, and *120 days*).

INIFI scome admin hagaat						Riveless Coress Payments/Transactions	Vachers Operator Acco
ecent Payments							
						Show as	sests within 120 days

Search Enter keywords in the *Search* box to find a specific voucher based on *Code*, *Create Time*, or *Note* values.

Print all Unused Vouchers Click Print All Unused

Vouchers to send a page to your printer with voucher code and validity details.

Code Displays a list of active voucher codes.

Create Time Displays the time and date the voucher was created.

Note Displays any notes that were added using the *Add Notes* option during voucher creation.

Duration Displays the duration of minutes, hours, or days that the voucher enables the user to access the Internet.

Status Indicates whether it is a single-use or multi-use voucher.

Actions

- Revoke Immediately deactivates the selected voucher.
- Print Batch Prints the selected voucher.

Active Voucher Page Slider Adjust the slider from left to right to view all *Active Vouchers*.

Create Vouchers Includes the following:

- **Create** __ Specify the number of vouchers to create.
- <u>vouchers</u> Choose whether the voucher can be used *One-time* or for *Multi-use*.
- for ___ Choose how long the voucher is valid (options include 8 hours, 24 hours, 2 days, 3 days, 4 days, 7 days or User-defined).
- Add Notes Select to add a note specific to the batch of vouchers created.

Click Create Vouchers to create the vouchers as specified.

Operator Accounts

Allows the creation of *Operator Accounts* that can log in to *Hotspot Manager* to manage wireless guests, payments/ transactions, and vouchers.

- Search Enter keywords in the Search box to find a specific operator account based on Name, Password or Notes values.
- Actions Click Delete to remove an operator.
- Account Enter a name for the operator. The Account can only be A-Z, a-z, or 0-9. No spaces are allowed.
- **Password** Enter a password for the operator. The *Password* has to start with A-Z, a-z, or 0-9 and the others can only be printable ASCII characters.
- Note If desired, enter a note to identify or describe the operator.
- Create Operator Click Create Operator to create the operator account as specified. To test the operator account, log out of the UniFi Controller software and log in using the operator credentials. Only the Wireless Guests, Payments/Transactions, and Vouchers tabs will appear.

Appendix A: Portal Customization

Overview

With *Portal Customization*, the UniFi Controller software allows complete branding of a portal implementation, allowing you to "white label" your wireless internet service as if you had developed it yourself.

In order to provide the maximum flexibility in your branding effort, the UniFi Controller software provides total access to the portal directory on the system in which it is installed.

This open architecture allows you to include unlimited content while keeping development simple through the use of plain .html (hand code or use any editor of your choice). Testing is simple and immediate by reloading changes from any browser.

Enabling Portal Customization

By default, *Portal Customization* is disabled in all *Guest Portal* implementations. See <u>"Settings > Guest Control"</u> <u>on page 9</u> for more information on enabling the *Guest Portal* for the following authentication and landing page options: *No authentication, Simple Password, Hotspot*.

To enable Portal Customization, perform the following steps:

1. Go to **Settings** and select **Guest Control**.

2. Make sure that the Guest Portal is enabled and select an authentication method.

3. Select Enable portal customization and click Apply.

Recent Events 🕴 Alerts 🎫	Settings Admin
Settings » Guest Control

Viewing the Default Portal

Once Guest Portal > Portal Customization is enabled, connect to the Guest Network SSID as shown below, depending on your platform.

Windows

- 1. Go to Connect to Network.
 - Windows 7 Right-click the Network 📜 icon.
 - Windows Vista Go to Start > Connect To.
 - Windows XP Right-click the Wireless Network Right-click the Wireless Network Right in the System Tray (lower right corner of the screen) and then click View Available Wireless Networks.
- 2. Select the *Guest Network* SSID and click **Connect**.
- Depending on the security type applied to the network, enter the security key or password. Click OK or Connect.
- Launch your web browser and you will be directed to the default portal page for the authentication type configued on the *Guest Portal* (see <u>"Settings > Guest</u> <u>Control" on page 9</u> for screenshots of default portal pages by authentication method).

Mac

- 1. Click the *AirPort* $\widehat{\frown}$ icon in the menu bar (top left side of the screen).
- 2. Select the *Guest Network* SSID and click **Connect**.
- 3. Depending on the security type applied to the network, enter the security key or password. Click **OK**.
- 4. Once connected, the *AirPort* $\widehat{\uparrow}$ icon will change from gray to solid black. The number of black lines indicates the signal strength.
- Launch your web browser and you will be directed to the default portal page for the authentication type configued on the *Guest Portal* (see <u>"Settings > Guest</u> <u>Control" on page 9</u> for screenshots of default portal pages by authentication method).

Setup

The html and css files are located on the system that the UniFi Server software has been installed on. The file paths are in the following locations:

Mac:

/Applications/UniFi.app/Contents/Resources/data/portal Windows:

<Drive_Letter>:\Users\<Username>\Ubiquiti UniFi\data\ portal

For specific instructions on accessing the files, refer to the specific operating system following:

Mac

1. Navigate to **Go** > **Applications**.

2. Control-click the UniFi application and select Show Package Contents.

3. Double-click the **Contents** folder to open it.

4. Double-click the Resources folder to open it.

5. Double-click the **data** folder to open it.

Windows

The Windows files are located in the following location: <Drive_Letter>:\Users\<Username>\Ubiquiti UniFi\ data\portal

Customizable Default Files

The following default customizable html and css files can be found in the *portal* folder:

- index.html The main landing page.
- payment.html Used for credit card information submission. Requires https, and also serves as an example of additional .html page.
- **fail.html** Page displayed when there is an error handling a guest login.
- reset-min.css
- styles.css

Another important customizable file is located in the *bundle* folder. The messages.properties file can be edited with a text editor such as TextEdit. This defines package costs, length of access, package titles, and how the charge will appear on a customer's credit card. Error messages are also defined here.

0 0	messages.properties

Appendix B: UniFi Discovery Utility

Overview

The Ubiquiti UniFi Discovery Utility includes tools that allow the discovery and management of UniFi Enterprise WiFi System Access Points. It is installed automatically as part of the UniFi Controller software installation process. See <u>"Software Installation" on page 5</u> for more information.

Launching the UniFi Discovery Utility

Mac Users

From the Finder, click **Go** > **Applications** and double-click the *UniFi-Discover.app* icon.

PC Users

Go to **Start** > **All Programs** > **Ubiquiti UniFi** and doubleclick the *UniFi-Discover* icon.

UniFi Discovery Utility Interface

Upon launch, the UniFi Discovery Utility listens to Layer-2 broadcast/multicast beacons from UniFi Access Points in both factory default state and an unmanaged state (adopted but unable to contact the UniFi Controller software).

MAC Address Displays the MAC address and alias (in parentheses if specified – see <u>"Configuration" on page</u> <u>33</u> for details on specifying an alias) of the Access Point.

IP Address Displays the IP address of the Access Point and the method used by the Access Point to obtain an IP address (in parentheses as *DHCP* or *Static*).

Model Displays the model name of the UniFi WiFi System Access Point.

Version The software version installed on the Access Point is displayed here.

Status Displays the current status of the Access Point. Possible statuses include: *Pending*, *Managed/Adopted*, *Login Failed*, and *IP Unreachable*.

Locate Click to Locate the Access Point. The following window appears:

Status:	Managed/Adopted
Status.	This device is managed by other controller. You need to provide the username/password in order to perform any actions against this device.
Model:	UniFi AP (2.1.0.942)
IP Address:	192.168.25.115 (dhcp)
MAC Address:	00:15:6d:5c:b5:d1 (UAP6)
Actions:	Locate +
Username:	ubnt
Password:	ubnt

The LED on the Access Point will flash so that it can be identified from other Access Points. If the Access Point's status requires the entry of a username and password, enter them before clicking *Apply*.

Manage Click to set the inform URL, allowing the Access Point to be managed by an instance of the UniFi Controller software running in a NOC or in the cloud (see <u>"Network Topology Requirements" on page 1</u> for a visual representation of this configuration). The following window appears:

000 19	92.168.25.115 - Apply
Device Information	
Status:	Managed/Adopted
	This device is managed by other controller. You need to provide the username/password in order to perform any actions against this device.
Model:	UniFi AP (2.1.0.942)
IP Address:	192.168.25.115 (dhcp)
MAC Address:	00:15:6d:5c:b5:d1 (UAP6)
Actions:	Set Inform \$
Set Inform URL:	http://unifi:8080/inform
Username:	ubnt
Password:	ubnt
	Apply Cancel

Enter the URL, port and path to the instance of the UniFi Controller software that the Access Point is to be managed by. If the Access Point's status requires the entry of a username and password, enter them before clicking *Apply*.

Reset Click to restore the Access Point to factory default settings. The following window appears:

Status:	Managed/Adopted
	This device is managed by other controller. You need to provide the username/password in order to perform any actions against this device.
Model:	UniFi AP (2.1.0.942)
IP Address:	192.168.25.115 (dhcp)
MAC Address:	00:15:6d:5c:b5:d1 (UAP6)
Actions:	Restore to factory default \$
Username:	ubnt
Password:	ubnt

If the Access Point's status requires the entry of a username and password, enter them before clicking *Apply*.

Reboot Click to reboot Access Point. The following window appears:

Status: Managed/Adopted This device is managed by other controller. You need to provide the username/password in order to perform any actions against this device. Model: UniFi AP (2.1.0.942) IP Address: 192.168.25.115 (dhcp) MAC Address: 00:15:6d:5c:b5:d1 (UAP6)	
controller. You need to provide the username/password in order to perform any actions against this device. Model: UniFi AP (2.1.0.942) IP Address: 192.168.25.115 (dhcp)	
IP Address: 192.168.25.115 (dhcp)	
······································	
MAC Address: 00:15:6d:5c:b5:d1 (UAP6)	
Actions: Reboot +	
Username: ubnt	
Password: ubnt	

If the Access Point's status requires the entry of a username and password, enter them before clicking *Apply*.

Appendix C: Specifications

UniFi AP (UAP) Specifications			
Dimensions	20 x 20 x 3.65 cm		
Weight	290 g (430 g with Mounting Kits)		
Networking Interface	(1) 10/100 Ethernet Port		
Buttons	Reset		
Antennas	2 Integrated (Supports 2x2 MIMO with Spatial Diversity)		
Wi-Fi Standards	802.11 b/g/n*		
Power Method	Passive Power over Ethernet (12-24V)		
Power Supply	24V 0.5A PoE Adapter Included		
Maximum Power Consumption	4W		
Max TX Power	20 dBm		
BSSID	Up to Four per Radio		
Power Save	Supported		
Wireless Security	WEP, WPA-PSK, WPA-TKIP, WPA2 AES, 802.11i		
Certifications	CE, FCC, IC		
Mounting	Wall/Ceiling (Kits Included)		
Operating Temperature	-10 to 70°C (14 to 158° F)		
Operating Humidity	5 - 80% Condensing		
Advanced Traffic Management			
VLAN	802.1Q		
Advanced QoS	Per-User Rate Limiting		
Guest Traffic Isolation	Supported		
WMM	Voice, Video, Best Effort, and Background		
Concurrent Clients	100+		
	Supported Data Rates (Mbps)		
Standard	Data Rates		
802.11n	6.5 Mbps to 300 Mbps (MCS0 - MCS15, HT 20/40)		
802.11b	1, 2, 5.5, 11 Mbps		
802.11g	6, 9, 12, 18, 24, 36, 48, 54 Mbps		
802.11g	6, 9, 12, 18, 24, 36, 48, 54 Mbps

Appendix D: Safety Notices

- 1. Read, follow, and keep these instructions.
- 2. Heed all warnings.
- 3. Only use attachments/accessories specified by the manufacturer.

WARNING: Do not use this product in location that can be submerged by water.

Electrical Safety Information

- Compliance is required with respect to voltage, frequency, and current requirements indicated on the manufacturer's label. Connection to a different power source than those specified may result in improper operation, damage to the equipment or pose a fire hazard if the limitations are not followed.
- 2. There are no operator serviceable parts inside this equipment. Service should be provided only by a qualified service technician.
- 3. This equipment is provided with a detachable power cord which has an integral safety ground wire intended for connection to a grounded safety outlet.
 - a. Do not substitute the power cord with one that is not the provided approved type. Never use an adapter plug to connect to a 2-wire outlet as this will defeat the continuity of the grounding wire.
 - b. The equipment requires the use of the ground wire as a part of the safety certification, modification or misuse can provide a shock hazard that can result in serious injury or death.
 - c. Contact a qualified electrician or the manufacturer if there are questions about the installation prior to connecting the equipment.
 - d. Protective earthing is provided by Listed AC adapter. Building installation shall provide appropriate short-circuit backup protection.
 - e. Protective bonding must be installed in accordance with local national wiring rules and regulations.

Appendix E: Warranty

General Warranty

UBIQUITI NETWORKS, Inc ("UBIQUITI NETWORKS") represents and warrants that the Products furnished hereunder shall be free from defects in material and workmanship for a period of one (1) year from the date of shipment by UBIQUITI NETWORKS under normal use and operation. UBIQUITI NETWORKS sole and exclusive obligation under the foregoing warranty shall be to repair or replace, at its option, any defective Product that fails during the warranty period. The expense of removal and reinstallation of any item is not included in this warranty.

The foregoing warranty is exclusive and in lieu of all other warranties, express or implied, including the implied warranties of merchantability and fitness for a particular purpose and any warranties arising from a course of dealing, usage or trade practice with respect to the products. Repair or replacement in the manner provided herein shall be the sole and exclusive remedy of Buyer for breach of warranty and shall constitute fulfillment of all liabilities of UBIQUITI NETWORKS with respect to the quality and performance of the Products. UBIQUITI NETWORKS reserves the right to inspect all defective Products (which must be returned by Buyer to UBIQUITI NETWORKS factory freight prepaid).

No Products will be accepted for replacement or repair without obtaining a Return Materials Authorization (RMA) number from UBIQUITI NETWORKS. Products returned without an RMA number will not be processed and will be returned to Buyer freight collect. UBIQUITI NETWORKS shall have no obligation to make repairs or replacement necessitated by catastrophe, fault, negligence, misuse, abuse, or accident by Buyer, Buyer's customers or any other parties. The warranty period of any repaired or replaced. Product shall not extend beyond its original term.

Warranty Conditions

The foregoing warranty shall apply only if:

- The Product has not been subjected to misuse, neglect or unusual physical, electrical or electromagnetic stress, or some other type of accident.
- (II) No modification, alteration or addition has been made to the Product by persons other than UBIQUITI NETWORKS or UBIQUITI NETWORK'S authorized representatives or otherwise approved by UBIQUITI NETWORKS.
- (III) The Product has been properly installed and used at all times in accordance, and in all material respects, with the applicable Product documentation.
- (IV) All Ethernet cabling runs use CAT5 (or above) shielded cabling.

Disclaimer

UBIQUITI NETWORKS does not warrant that the operation of the products is error-free or that operation will be uninterrupted. In no event shall UBIQUITI NETWORKS be responsible for damages or claims of any nature or description relating to system performance, including coverage, buyer's selection of products for buyer's application and/or failure of products to meet government or regulatory requirements.

Returns

In the unlikely event a defect occurs, please work through the dealer or distributor from which this product was purchased.

Appendix F: Compliance Information

Installer Compliance Responsibility

Devices must be professionally installed and it is the professional installer's responsibility to make sure the device is operated within local country regulatory requirements.

FCC

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

- 1. this device may not cause harmful interference, and
- 2. this device must accept any interference received, including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operations of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

For MPE and antenna usage details, please visit our website at

www.ubnt.com/products

Industry Canada

This Class A digital apparatus complies with Canadian ICES-003.

To reduce potential radio interference to other users, the antenna type and its gain should be so chosen that the equivalent isotropically radiated power (e.i.r.p.) is not more than that permitted for successful communication.

This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions:

- 1. this device may not cause interference, and
- 2. this device must accept any interference, including interference that may cause undesired operation of the device.

Cet appareil numérique de la classe A est confrome à la norme NMB-003 Canada.

Pour réduire le risque d'interférence aux autres utilisateurs, le type d'antenne et son gain doivent être choisies de façon que la puissance isotrope rayonnée équivalente (PIRE) ne dépasse pas ce qui est nécessaire pour une communication réussie.

Cet appareil est conforme à la norme RSS Industrie Canada exempts de licence norme(s). Son fonctionnement est soumis aux deux conditions suivantes:

- 1. cet appareil ne peut pas provoquer d'interférences et
- cet appareil doit accepter toute interférence, y compris les interférences qui peuvent causer un mauvais fonctionnement du dispositif.

RF Exposure Warning

The antennas used for this transmitter must be installed to provide a separation distance of at least 20 cm from all persons and must not be located or operating in conjunction with any other antenna or transmitter.

Les antennes utilisées pour ce transmetteur doivent être installé en considérant une distance de séparation de toute personnes d'au moins 20 cm et ne doivent pas être localisé ou utilisé en conflit avec tout autre antenne ou transmetteur.

CE Marking

CE marking on this product represents the product is in compliance with all directives that are applicable to it.

Alert sign! Follows CE marking

Alert sign must be indicated if a restriction on use applied to the

product and it must follow the CE marking.

RoHS/WEEE Compliance Statement

English

European Directive 2002/96/EC requires that the equipment bearing this symbol on the product and/ or its packaging must not be disposed of with unsorted municipal waste. The symbol indicates that this product should be disposed of separately from regular household waste streams. It is your responsibility to dispose of this and other electric and electronic equipment via designated collection facilities appointed by the government or local authorities. Correct disposal and recycling will help prevent potential negative consequences to the environment and human health. For more detailed information about the disposal of your old equipment, please contact your local authorities, waste disposal service, or the shop where you purchased the product.

Deutsch

Die Europäische Richtlinie 2002/96/EC verlangt, dass technische Ausrüstung, die direkt am Gerät und/oder an der Verpackung mit diesem Symbol versehen ist, nicht zusammen mit unsortiertem Gemeindeabfall entsorgt werden darf. Das Symbol weist darauf hin, dass das Produkt von regulärem Haushaltmüll getrennt entsorgt werden sollte. Es liegt in Ihrer Verantwortung, dieses Gerät und andere elektrische und elektronische Geräte über die dafür zuständigen und von der Regierung oder örtlichen Behörden dazu bestimmten Sammelstellen zu entsorgen. Ordnungsgemäßes Entsorgen und Recyceln trägt dazu bei, potentielle negative Folgen für Umwelt und die menschliche Gesundheit zu vermeiden. Wenn Sie weitere Informationen zur Entsorgung Ihrer Altgeräte benötigen, wenden Sie sich bitte an die örtlichen Behörden oder städtischen Entsorgungsdienste oder an den Händler, bei dem Sie das Produkt erworben haben.

Español

La Directiva 2002/96/CE de la UE exige que los equipos que lleven este símbolo en el propio aparato y/o en su embalaje no deben eliminarse junto con otros residuos urbanos no seleccionados. El símbolo indica que el producto en cuestión debe separarse de los residuos domésticos convencionales con vistas a su eliminación. Es responsabilidad suya desechar este y cualesquiera otros aparatos eléctricos y electrónicos a través de los puntos de recogida que ponen a su disposición el gobierno y las autoridades locales. Al desechar y reciclar correctamente estos aparatos estará contribuyendo a evitar posibles consecuencias negativas para el medio ambiente y la salud de las personas. Si desea obtener información más detallada sobre la eliminación segura de su aparato usado, consulte a las autoridades locales, al servicio de recogida y eliminación de residuos de su zona o pregunte en la tienda donde adquirió el producto.

Français

La directive européenne 2002/96/CE exige que l'équipement sur lequel est apposé ce symbole sur le produit et/ou son emballage ne soit pas jeté avec les autres ordures ménagères. Ce symbole indique que le produit doit être éliminé dans un circuit distinct de celui pour les déchets des ménages. Il est de votre responsabilité de jeter ce matériel ainsi que tout autre matériel électrique ou électronique par les moyens de collecte indigués par le gouvernement et les pouvoirs publics des collectivités territoriales. L'élimination et le recyclage en bonne et due forme ont pour but de lutter contre l'impact néfaste potentiel de ce type de produits sur l'environnement et la santé publique. Pour plus d'informations sur le mode d'élimination de votre ancien équipement, veuillez prendre contact avec les pouvoirs publics locaux, le service de traitement des déchets, ou l'endroit où vous avez acheté le produit.

Italiano

La direttiva europea 2002/96/EC richiede che le apparecchiature contrassegnate con questo simbolo sul prodotto e/o sull'imballaggio non siano smaltite insieme ai rifiuti urbani non differenziati. Il simbolo indica che questo prodotto non deve essere smaltito insieme ai normali rifiuti domestici. È responsabilità del proprietario smaltire sia questi prodotti sia le altre apparecchiature elettriche ed elettroniche mediante le specifiche strutture di raccolta indicate dal governo o dagli enti pubblici locali. Il corretto smaltimento ed il riciclaggio aiuteranno a prevenire conseguenze potenzialmente negative per l'ambiente e per la salute dell'essere umano. Per ricevere informazioni più dettagliate circa lo smaltimento delle vecchie apparecchiature in Vostro possesso, Vi invitiamo a contattare gli enti pubblici di competenza, il servizio di smaltimento rifiuti o il negozio nel quale avete acquistato il prodotto.

Appendix G: Declaration of Conformity

Appendix G: Declaration of Conformity

Česky [Czech]	UBIQUITI NETWORKS tímto prohla uje, e tento UBIQUITI NETWORKS device, je ve shod se základními po adavky a dal ími p íslu n mi ustanoveními sm rnice 1999/5/ES.
